

700 SERIES DOUBLE HUNG AND SLIDER LOCKS

DESIGNED DOWN TO THE DETAILS.

Presenting the 700 Series from Truth Hardware: an entirely new line of double hung and slider hardware. A unique combination of sleek, contemporary design and innovative details, it also allows you to place your company logo front and center. Which makes the 700 Series the best way to get your name into more homes than ever.

A NEW LOOK FROM A TRUSTED NAME

Remarkably low profiles. Delicately curved lock handles. If you've been considering a new look for your double hung and slider products, look no further.

The sleek, stylish design sets a new standard for hardware aesthetics. But it's just the beginning: once we print your logo directly on the locks, the real beauty of these locks comes through. Referrals and word of mouth recommendations are more likely. And since our hardware and your window combine to create an outstanding, reliable unit, consumer confidence in your brand will continue to grow.

The evolution of window hardware has skipped ahead a few generations. Make sure you're not left behind. To learn more about the 700 Series or to discuss the right lock for your line, call 1-800-866-7884 or visit www.truth.com.

- Quality manufacturing from the industry leader

MAKING IT EASIER ON YOU BY MAKING IT EASIER ON YOUR CUSTOMERS

In addition to Truth's standard finishes, every lock in the 700 Series is available in a wide assortment of decorative plated finishes (upon request) so they will match your hardware across product lines. The industry standard screw locations fit a wide variety of profiles, remaining consistent with current Truth designs for easy switch-out. And the ability to interchange handles between the Delta lock designs allows you to create a custom look without the custom upcharge.

By working with ideas from you and your customers, we were able to incorporate new innovations that set the 700 Series above and beyond average double hung and slider hardware. A forgiving cam helps to eliminate costly field service calls by ensuring proper engagement between the lock and keeper even on assemblies where these two components may be misaligned. The pick-resistant cam design helps your windows exceed load requirements in forced entry testing.

Reliable performance over time is ensured by fully concealing the locking mechanism, protecting moving parts from dust plus creating a better seal at the head and sill. And the locking action even feels better, with a well-defined locking and unlocking detent that assures the user that the cam is securely in place.
