

Now you can install and adjust doors & windows quicker and easier than ever before. Truth's Jamb Jacks are a specially designed fastening system for mounting door & window frames into rough openings. Jamb Jacks replace the shims used to square the window or door in the rough opening.

FASTER INSTALLATION:

Using the unique adjustable "screws" (Jamb Jacks) a single unit can be installed without shims in just minutes.

SIMPLE ADJUSTMENT:

Jamb Jacks provide quick and precise window and door adjustment at the time of installation and when future problems develop caused by foundation settlement. No more need to tear apart a door or window to re-shim it. By simply turning the Jamb Jack screws all necessary adjustments can easily be made while the unit is in place.

VERSATILE:

Jamb Jacks are available for most wood door and window systems, including residential, light commercial or replacement applications, with wood or masonry openings.

MATERIAL:

Steel screws. Acetal insert and finishing cap.

Jamb Jack II shown

ORDERING INFORMATION:

Jamb Jack II (windows)

1. Order **#21170** - Jamb Jack II. See Truth Tip #2.

Optional

- #21146.73** Finishing Cap. (See Truth Tip #3).

4. Also available pre-packaged as installer packs for doors or windows - includes: inserts, screws, finishing cap and turbo driver.

#11076 Installer Pack (door)

TRUTH TIPS:

1. When installing the Jamb Jack III screw into the frame, make sure that the screw snaps twice into the insert.
2. Truth recommends that six Jamb Jack's be used in every door application (three per jamb) and four be used in window applications (two per jamb). NOTE: Additional Jamb Jacks may be required for window applications depending upon the size of the unit.
3. White Finishing Cap may be painted to match non-standard colors.
4. T25 Torx Driver is required for installing and adjusting Jamb Jack III Screws. Not available from Truth Hardware.
5. Solid shims are recommended behind the strike plate locations on door jamb installations.
6. Due to the design of both Jamb Jack II and Jamb Jack III, neither system can be removed once they are installed. Care must be used when selecting installation points for any Jamb Jack unit.
